Representative from Male' Aerated Water Company:

Very good evening all. Thank you for giving this opportunity. See there are several points which everyone is talking about environment. It is true that we are all on the same page now. We are working on the same agenda. So, what we are working on is, you know we have to reduce the problem first. And take it forward to the zero level. As a corporate what we are working at global level and similarly we are working at Maldives level. To avoid this problem, we have for about 68 thousand residence in Maldives. In that, if we can target at least 50% immediately, where the solution is in Male', Hulhumale' and Addu, where there is a direct contribution that we can work on. The option, the alternative options need to be created. So, the option what we are looking at giving a option of 20 liter water jar instead of this 5 liter and 1.5 bottle. So, there are for about 350 million 1.5 bottles in a year is consumed in residents. If this 20-liter option, which is a refillable option is given, immediately we can target this 350 million reduce to the environment.

Representative from Male' Aerated Water Company:

Yeah, 350 million bottles are consumed every year which can be targeted immediately for these 50%. So, yes, we are all working on the same thing. But I am saying we can give this plan face twice a year, one with some target. Year two, it can be sustainable. So, we are working on one is that. And the second thing is for the resorts we are working on a glass bottle where the entire plastic thing can be replaced with the glass bottle. We are launching it very soon and similarly we are working on other replacement of plastic to glass bottle in Maldives. So that's how you know we are working on to give a sustainable solution.
